

Peterson's Solution

Process = 0

```
interested[0]=interested[1]=FALSE  
int barrier;  
int interested[2];
```

```
void enter_region(...){  
    int other = 1;  
    interested[0] = TRUE;  
    barrier = 0;  
    while (barrier != 0 &&  
           interested[other] == TRUE);  
}  
// critical section  
void leave_region(...){  
    interested[0] = FALSE;
```

Process = 1

```
void enter_region(...){  
    int other = 0;  
    interested[1] = TRUE;  
    barrier = 1;  
    while (barrier != 1 &&  
           interested[other] == TRUE);  
}  
// critical section  
void leave_region(...){  
    interested[1] = FALSE;
```
